Re: **FCC Determination on Foreign-Produced Connected Power Inverters**

Dear Customer :

The purpose of this letter is to share with you CE+T America's position on the recent FCC Covered List restrictions on foreign-produced power inverters. The FCC guidance defines a foreign-produced product as an article that does not qualify as a "domestic end product" under 48 CFR § 25.101(a). CE+T America products supplied to our customers meet the requirements of a domestic end product and therefore do not fall within the scope of the restriction as described.

All products delivered to our customers are manufactured, tested, and UL certified in the United States at our production facility in Duluth, Georgia. In addition, our systems currently contain more than 65% U.S. content, satisfying the domestic content requirements established under 48 CFR § 25.101(a). CE+T America has also implemented a comprehensive onshoring strategy that will further increase domestic content to approximately 95% by the end of March 2027. This timeline remains well within the transition period contemplated by the FCC and demonstrates our continued commitment to U.S.-based manufacturing, supply chain resiliency, and regulatory compliance.

From a cybersecurity perspective, CE+T America maintains full ownership and control of product design, software development, firmware management, and long-term maintenance. All software is developed and managed under CE+T America's control, and security is reinforced through industry-standard protections, including the latest RADIUS security protocols, role-based access controls, and two-factor authentication. These measures ensure that system access, monitoring, and maintenance activities remain secure and under the direct supervision of CE+T America.

Based on the domestic manufacturing status of our products, our compliance with domestic content requirements, our ongoing onshoring initiative, and our comprehensive cybersecurity controls, CE+T America does not believe that an FCC exemption or conditional approval is required. We are confident that our products either fall outside the scope of the FCC restriction or fully satisfy the applicable domestic manufacturing and onshoring requirements within the prescribed transition period.

The person whose signature appears below is authorized to make the commitments noted above.

Sincerely,

Mario Barbaresso
